

## Pipework installation

Pipework installation services for hydraulic, pneumatic and instrumentation systems

### Services

We can provide the complete solution to your pipework and tubing requirements, including:

- Engineering and project management
- Workpack with procedures and risk assessments
- Competent personnel and pressure testing equipment
- Reports, certification and documentation pack

### Equipment

With our hydraulic workshop containers, portable pipe bending and flaring tools and machines, we are equipped to tackle pipework and tubing installation projects on-site, offshore and in the workshop.

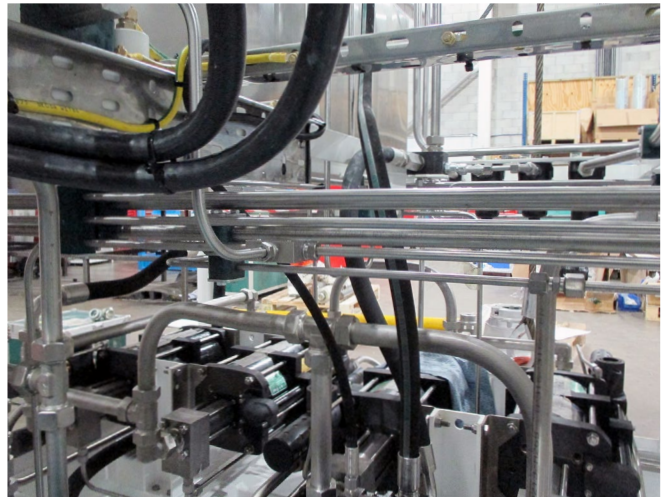

Sparrows can then ready the pipework system for service by pressure testing and flushing to the required cleanliness level.

### People

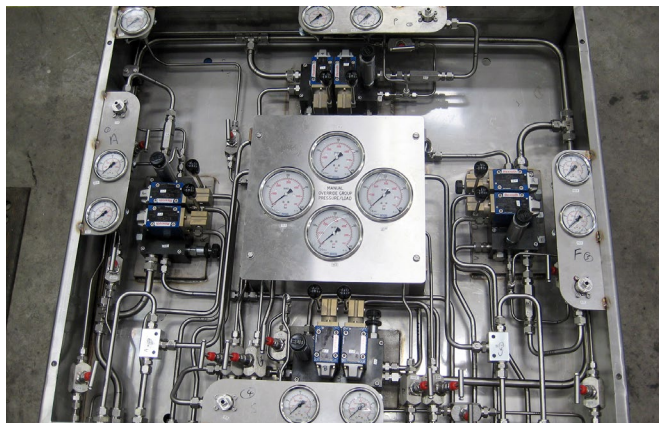

Our hydraulic technicians are experienced in pipework installation, pressure testing and flushing.

### Engineering Support

Sparrows can offer a fully project managed package, including workpack containing procedures and risk assessments, supply of equipment and materials, and final certification package.
