

Abu Dhabi training centre

Rigging, lifting, banksman and crane operator courses to ensure competency in the workforce.

When people are trained, assessed and certified by us you can be assured of their competence to carry out their role to the Sparrows exacting and industry leading standard. All our trainers are staff members who have been selected for their technical expertise and industry experience.

As part of our operations hub, our training centre provides all the equipment for candidates to have hands-on practice and build their skills in a safe environment. Our offshore crane simulator provides maximum impact for testing a crane operator's reaction to emergency situations. The simulator enables us to conduct Stage 3 re-assessments, adding client value as there is no logistical impact and cost for offshore travel.

The site also contains a rigging frame, overhead crane, rigging loft and crane components suitable for rigging, overhead crane operator, rigging loft management and API inspection courses.

SPARROWS OFFSHORE CRANE OPERATOR STANDARD

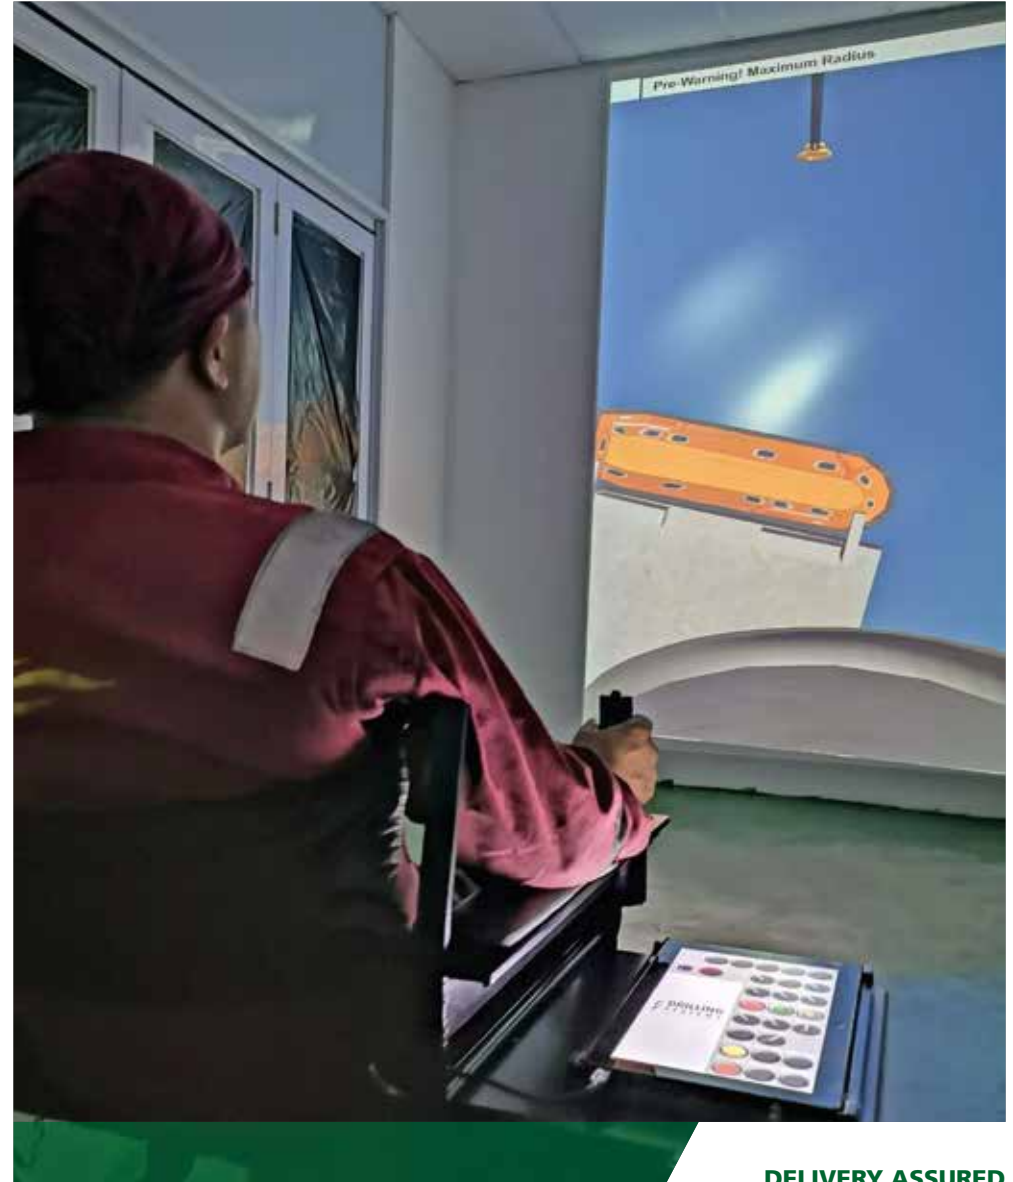

Our crane operator standard is recognised as the oil and gas industry's international 'de facto' standard. This dominant position is a product of over 45 years' experience as the offshore leaders in lifting operations.

BESPOKE / ON-LOCATION

We recognise that standard training courses don't always meet our client's specific requirements and that is why we regularly design bespoke courses that deliver tailored content.

We don't just offer courses at our training centres, we often deliver at client locations, anywhere in the world, both onshore and offshore. All our centres have portable crane simulators that can be easily deployed quickly to any location. Whatever your requirements, challenge us to create a course for you.

Standard courses overleaf...
